

ALLIANCEBERNSTEIN®

AB Low Volatility Total Return Equity Portfolio¹

OBJECTIVE & STRATEGY

The Portfolio seeks to increase the value of your investment over time through a combination of income and capital growth (total return) while seeking to maintain a net exposure to global equity markets (or beta) that is close to zero. The Portfolio typically invests in equity securities of companies that are organized, have substantial business activities, or are impacted by developments, in developed countries and emerging markets. The Investment Manager uses fundamental research and a proprietary quantitative risk/return model to select securities that appear to be high quality, to have low volatility and reasonable valuations and to offer attractive shareholder returns (bottom-up approach) and seeks to reduce most of the effects of overall equity market movements, or beta, by using derivatives to reduce the Portfolio's exposure to the MSCI World Unhedged Index. The beta hedging strategy intends to reduce, but may not eliminate, the equity market exposure of the Portfolio.

#Past performance is not indicative of future results. Performance calculation are based on a single pricing basis, include the change in Net Asset Value and reinvestment of any distributions paid on Portfolio shares for the period shown, net of assumed front-end load (FEL) 4% for Class A/AD shares. For Class A/AD shares, maximum front-end load (FEL): Up to 5%. Accordingly, these figures do not represent actual returns to an investor. Performance quoted in currencies other than the base currency of the Portfolio is calculated by converting the daily Net Asset Value of the Portfolio using a spot foreign exchange rate of the other offered currency on each valuation point. Returns denominated in a currency other than that of the fund may increase or decrease as a result of foreign exchange currency fluctuations. The information on this page is for informational purposes only and should not be construed as an offer to sell, or solicitation of an offer to buy, or a recommendation for the securities of the Portfolio.

[^] Net Asset Value is denominated in the share class currency.

Currency-hedged share classes use hedging techniques in an attempt to reduce—but not eliminate fluctuations between the investor's holdings in a particular currency-hedged share class denominated in the investor's investing currency and the portfolio's base currency. The goal is to deliver returns that track the portfolio's base currency returns more closely.

Investment in the Fund entails certain risks. Investment returns and principal value of the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund is meant as a vehicle for diversification and does not represent a complete investment program. Some of the principal risks of investing in the Fund (risks typically associated with ordinary market conditions) include currency risk, derivatives risk, emerging/frontier markets risk, equity securities risk, hedging risk, leverage risk and small/mid-cap equities risk. The Portfolio is entitled to use derivative instruments for hedging and/or EPM purposes which may involve additional risks different from, and, in certain cases, greater than, the risks presented by more traditional investments. These and other risks are described in the Fund's prospectus. Prospective investors should read the prospectus and Product Highlights Sheet carefully and discuss risk and the fund's fees and charges with their financial adviser to determine if the investment is appropriate for them.
